MITCHELL ENFIELD

Senior Software Engineer · Full-Stack TypeScript & Design Systems

St. Johns, FL | (561) 699-0925 | MitchEnfield@gmail.com | linkedin.com/in/mitchell-enfield | github.com/MEnfield

Full-stack engineer with 10 years shipping product in TypeScript. Currently own the shared component library and design-system tooling behind a health-insurance platform, used across its consumer and employer-facing applications. Outside of work I designed, built, and run Riff Circle, a production social platform for musicians, entirely on my own — schema and migrations through to billing, monitoring, and deploys.

10 yrs	Since 2017	8 apps
BUILDING SOFTWARE PROFESSIONALLY	SHIPPING REACT IN PRODUCTION	SHIPPED ACROSS 4 EMPLOYERS

CORE SKILLS

Languages & Frameworks	TypeScript, JavaScript, React, Next.js, Node.js, Express
Front-End	Design systems, Storybook, MUI, Tailwind / shadcn, WCAG accessibility, responsive UI
Back-End & Data	REST API design, Zod, MySQL, PostgreSQL, SQL Server, Prisma
Testing	Vitest, Mock Service Worker, React Testing Library, Jest
Tooling & Practice	Turborepo, pnpm, LaunchDarkly, Figma, CI/CD, AI-augmented development

EXPERIENCE

Allstate

Remote · Part-time · Dec 2025 – Present

Software Engineer, Senior Consultant II

- Lead full-stack development across a TypeScript monorepo powering a suite of health-insurance products — a consumer shopping platform, employer and employee portals, and internal agent tooling.
- Own the shared React component library used across the platform's applications — component architecture, theming API, accessibility baseline, documentation, and test coverage.
- Created a Figma-to-code pipeline — a design-token fetch script plus a documented AI workflow — that turns a Figma component link into a themed, tested library component, eliminating a recurring class of design-parity defects.
- Led front-end delivery of a group health-benefits quoting experience, rolled out incrementally behind feature flags, covering benefit configuration, live cost calculations, and per-employee breakdowns.
- Shipped a bulk employer-data migration workflow end-to-end in the agent portal, from typed API client through upload validation and long-running job status.
- Established the front-end testing standard, introducing shared API-mocking infrastructure and eliminating flaky, time-dependent tests across the suite.
- Implemented multi-brand theming through a build-time brand-CSS package, letting one component library render distinct branded experiences across consumer, employer, and employee applications.
- Drove accessibility and responsive fixes across the library and shopping flows, and extended shared Zod schemas across the API/portal boundary so contract changes surface as compile-time errors.

HealthNetwork

Remote · Part-time · Jun 2023 – Dec 2025

Full-Stack Developer (Contract)

- Built features for the health-insurance application Allstate uses to onboard and manage group-policy customers.
- Implemented server-side rendering and API routes in Next.js to improve performance and SEO.
- Built responsive, accessible UI components in TypeScript, React, and Next.js for desktop and mobile.
- Modeled and queried MySQL data covering policy records, customer groups, and transactional history.

Simpli.fi
Remote · Full-time · Feb 2019 – Dec 2025

Senior UI/UX Developer

- Architected and led the migration of a legacy AngularJS codebase to a modern React + TypeScript stack, cutting technical debt and reducing feature development time.
- Led UI/UX for new product features, translating user needs and business goals into high-fidelity mockups and interactive prototypes in Figma.
- Architected scalable client-side solutions in React and TypeScript with an emphasis on maintainability and runtime performance.
- Mentored junior developers on front-end best practices and modern TypeScript, raising code quality and consistency across the team.

Driver's Alert
Deerfield Beach, FL · Full-time · Jan 2017 – Feb 2019

Full-Stack Software Engineer

- Contributed to a full redesign of a legacy web application, modernizing the stack with Node.js, Express, and React to improve performance and maintainability.
- Developed RESTful APIs in Node.js and Express to handle data operations and business logic, enabling a more modular and scalable backend.
- Designed SQL Server queries and stored procedures to support new features and optimize database interactions.
- Translated user requirements into technical tasks in design discussions, keeping front-end and backend work aligned.

Bidtellect
Delray Beach, FL · Part-time · Mar – Nov 2016

Quality Intern, then Independent Quality Contractor

- Reviewed developer code and designed test plans for a demand-side platform (DSP), documenting bugs, inconsistencies, and edge cases across core ad-serving features.

PRODUCT

Riff Circle riffcircle.com
Sole designer, engineer, and operator

- Designed and built a production social platform for musicians — map-based discovery of nearby players, gigs, jam sessions, and lessons — as a TypeScript monorepo on Next.js, tRPC, Prisma, and PostgreSQL/PostGIS, with a shared UI package documented in Storybook.
- Modeled the full relational domain — events, bands, setlists, messaging, reviews, and social graphs — evolved safely through versioned migrations and exposed via type-safe tRPC routers.
- Ran the full production surface solo: Stripe billing with webhook reconciliation, Redis-backed rate limiting, bot protection, Sentry error monitoring, scheduled cron jobs, web push notifications, and an installable PWA with offline support.

EDUCATION

Florida Atlantic University
B.S. Computer Science
2012 – 2016
